

Cell structure practice questions

SAMPLE PLACEHOLDER replace with your own worksheet.

1. State the function of each of the following: nucleus, mitochondrion, ribosome, plasma membrane.
2. Distinguish between a prokaryotic and a eukaryotic cell, referring to three named features.
3. Explain how the structure of the phospholipid bilayer is related to its role as a partially permeable barrier.
4. A student observes cells using a light microscope with a x40 objective and a x10 eyepiece. Calculate the total magnification and the actual diameter of a cell appearing 4 mm across.
5. Outline the evidence that supports the endosymbiotic theory.
