

## Respiration practice questions

SAMPLE PLACEHOLDER replace with your own worksheet.

1. Define aerobic respiration.
2. State the precise location of glycolysis, the link reaction, the Krebs cycle and oxidative phosphorylation in a eukaryotic cell.
3. Explain why the yield of ATP from the complete oxidation of one glucose molecule is greater than the yield from anaerobic respiration.
4. Distinguish between oxidation and reduction, using NAD as your example.
5. A respirometer records a fall of 0.8 cm<sup>3</sup> in gas volume in 5 minutes. Calculate the rate of oxygen uptake in cm<sup>3</sup> per minute.
